GUNSYND PLC · AIM: GUN

Barb Gold Project

High-grade gold confirmed at surface

Rice Lake Belt, Manitoba

Grab samples up to 489 g/t Au · Visible gold confirmed · Historic producer · Drill target defined at Lotus

IMPORTANT NOTICE

Disclaimer

These presentation slides have been prepared by and are the sole responsibility of Gunsynd Plc ("Gunsynd" or "the Company"). The directors of the Company have taken all reasonable care to ensure that the facts stated herein are true to the best of their knowledge and belief. The information in this document is subject to updating, revision and amendment. This document neither constitutes nor forms, nor should be construed as constituting or forming, part of any offer or invitation to sell or any solicitation of any offer to purchase or to subscribe for any securities in Gusnynd or any other body corporate, or an invitation or inducement to engage in investment activity under section 21 of the UK Financial Services and Markets Act 2000, nor shall it or any part of it form the basis of, or be relied on in connection with, any contract therefore. This document does not constitute an invitation to effect any transaction with Gunsynd nor to make use of any services provided by Gunsynd. No reliance may be placed for any purpose whatsoever on the information contained in this document nor on assumptions made as to its completeness.

No representation or warranty, express or implied, is given by Gunsynd, any of its subsidiaries or any of its respective advisers, officers, employees or agents, as to the accuracy, fairness or completeness of the information or opinions contained or expressed in the presentation and no liability is accepted for any such information or opinions (which should not be relied upon) or for any loss howsoever arising, directly or indirectly, from any use of its contents or information expressed in the presentation. The information and opinions contained in this presentation are provided as at the date of this document and the presentation is subject to change without notice. This presentation contains forward looking statements that are based on the Company's current expectations and estimates. Such forward looking statements involve known and unknown risks, uncertainties and other factors that could cause actual events or results to differ materially from estimated or anticipated events or results implied or expressed in such forward-looking statements. Any forward-looking statement speaks only as of the date on which it is made and Gunsynd disclaims any intent or obligation to update any forward-looking statement, whether as a result of new information, future events or results or otherwise. Forward-looking statements are not guarantees of future performance and, accordingly, undue reliance should not be put on such statements due to the inherent uncertainty therein.

INVESTMENT HIGHLIGHTS

Modern work has updated the thesis.

489 g/t Au

peak grab sample at Lotus

Visible gold

confirmed in Lotus samples

Past producer

mined & milled at Bissett, 1982

3 occurrences

Lotus, Denver, Betty — one corridor

UAV magnetics

property-wide survey complete

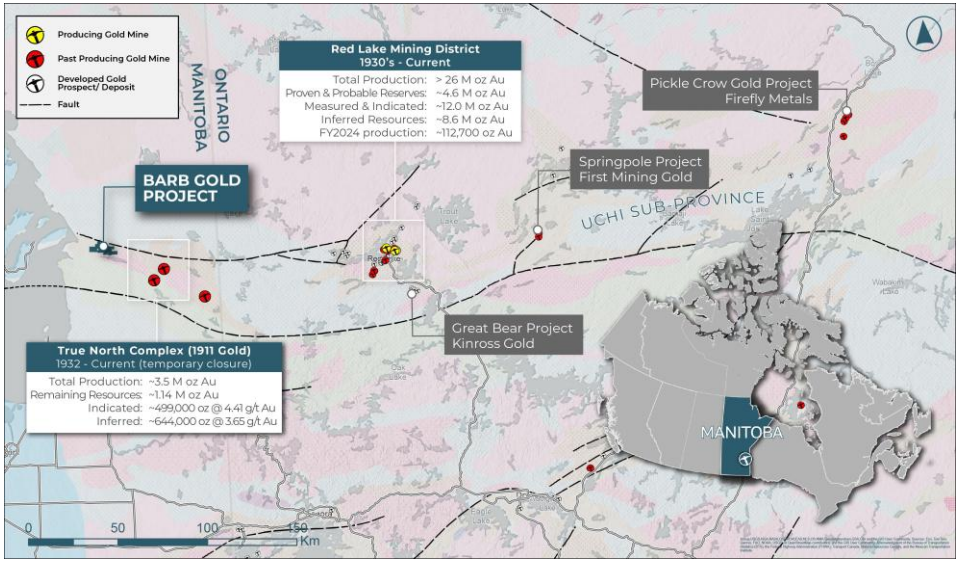

Lotus

drill target defined

THE BELT

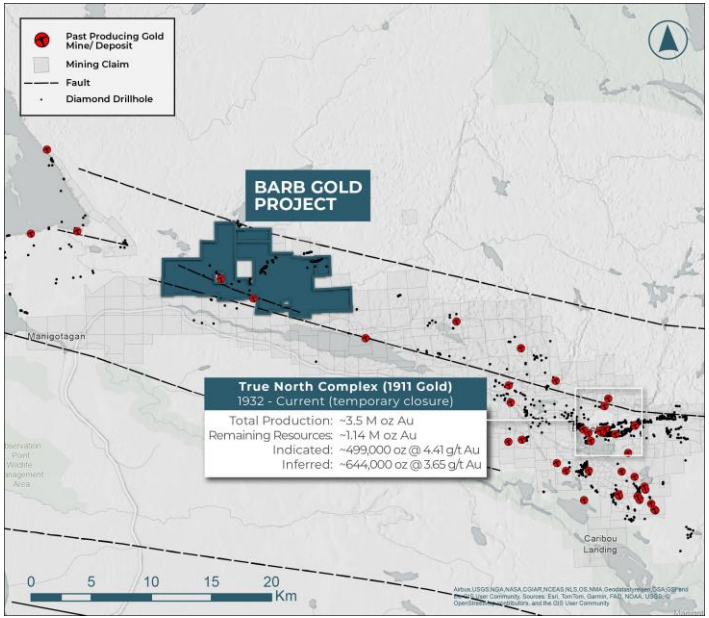

Rice Lake Belt endowment.

A tier-one Archean gold district — same family of belts as Red Lake — with a mill nearby.

INFRASTRUCTURE

1911 Gold and the fault-hosted clusters

TRUE NORTH MILL

1911 Gold operates a 1,500 tpd mill close to Barb — same regional structural corridor, same setting.

GOLD CLUSTERS ON FAULT

DISTRICT BLUEPRINT

Barb sits on the same regional structural corridor as True North — no modern drilling in ~40 years, now largely consolidated under Gunsynd.

MODERN EXPLORATION

Building a modern geological dataset.

The 2025–26 field programme, completed by Critical Discoveries:

- Prospecting and geological mapping completed.
- Rock-chip grab sampling across Lotus and Betty.
- Historic workings relocated and characterised.
- Visible gold confirmed in the field.
- Property-wide UAV magnetic survey flown.

PHASE 1 RESULTS

Grab samples up to 489 g/t Au at Lotus.

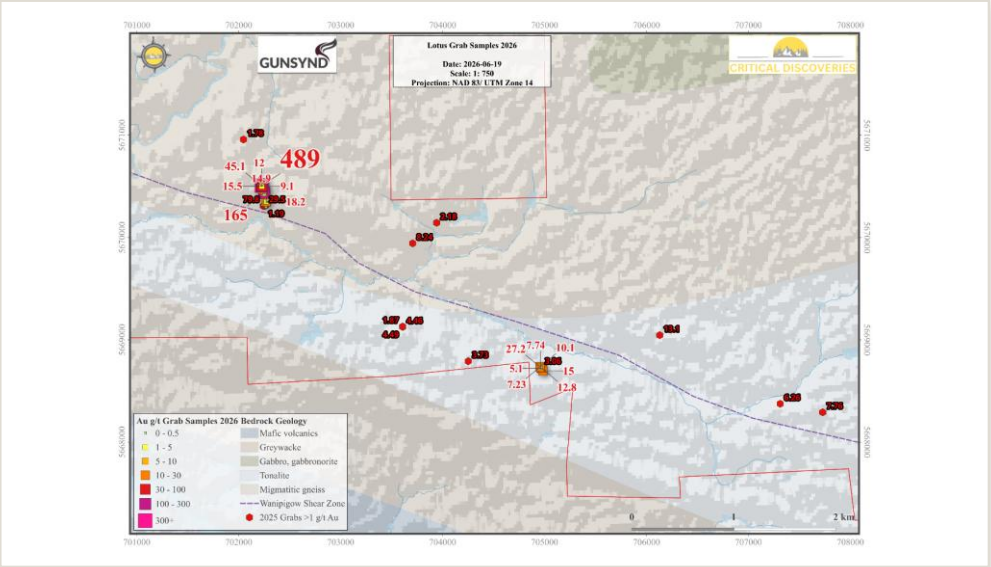

PEAK GRAB SAMPLE — LOTUS

489 g/t

59 grab samples, Lotus & Betty, 0.008–489 g/t Au.

35 > 1 g/t · 23 > 5 g/t · 3 > 100 g/t.

Visible gold in 12 Lotus samples. Betty: to 27.2 g/t, polymetallic (tetrahedrite–chalcopyrite).

Fist-sized grab samples from sites of observed mineralisation — selective and not representative of in-situ grade, width or continuity. Fire assay / gravimetric (Actlabs cert. A26-09795). Multi-element results returned.

THE PRIORITY TARGET

Lotus: a defined drill target.

WHY LOTUS?

- Historic producer with gold-bearing quartz veins exposed at surface.
- Visible gold confirmed; high-grade modern grab samples to 489 g/t.
- Esso brought Lotus into production in 1982 as supplementary San Antonio mill feed — 8,287 t milled at 4.56 g/t.
- Down-plunge and down-dip extensions below the historic workings remain untested.

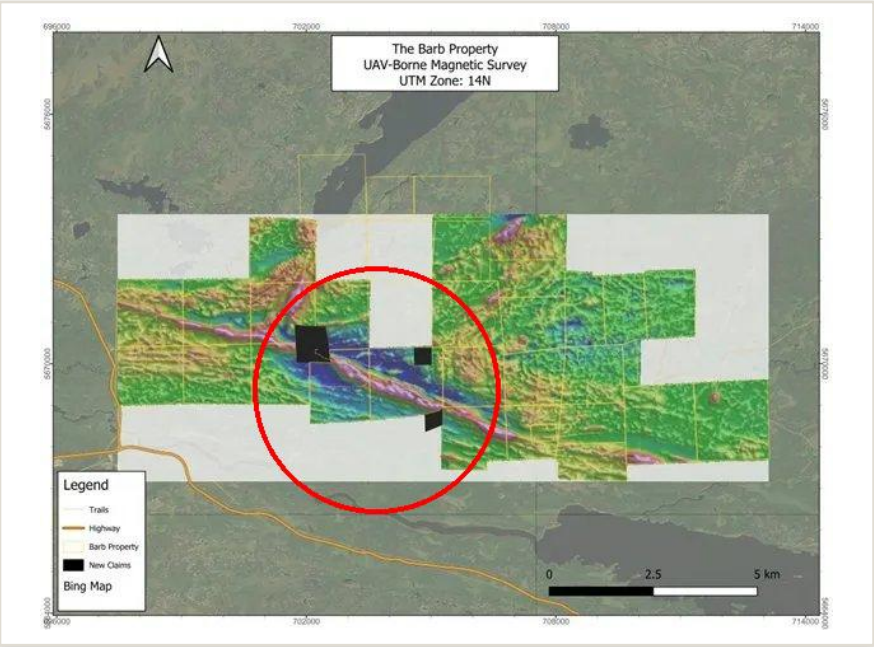

THE DRILL THESIS

Drilling is designed to test the continuity, geometry and grade of a known mineralised system beneath the historic workings.

Grade at surface is established. Whether it continues at depth is the open question — and the reason to drill.

MODERN INTERPRETATION

A coherent structural corridor.

The magnetic low is interpreted as an alteration corridor — the fingerprint of a gold-bearing fluid system that ran through the rock.

Lotus, Denver, Betty and the strongest 2026 grab samples all sit within this corridor — an important level of geological consistency across the property.

The historic workings fit the same framework — the published record (ER86-1) places the Lotus shear as an offshoot of the Wanipigow fault — now guiding drill targeting.

THE BROADER PROPERTY

Denver and Betty: supporting targets.

DENVER

Grab samples of 62 g/t and 221 g/t Au (2015 programme, per Company RNS). The high-grade end of the documented system, on the same corridor.

BETTY

2026 grab samples to 27.2 g/t Au — but polymetallic, with tetrahedrite and chalcopyrite. A different, copper-antimony-bearing character to the orogenic gold at Lotus and Denver.

Historic Denver figures pre-date NI 43-101 / JORC reporting standards and are not verified by a Qualified Person.

THE CONSOLIDATION

Reassembling the English Brook camp.

Fragmented across multiple owners as the gold price collapsed, the camp is now largely re-assembled — the bulk of the ground, including all three documented occurrences, held together for the first time in decades.

~6,612 ha

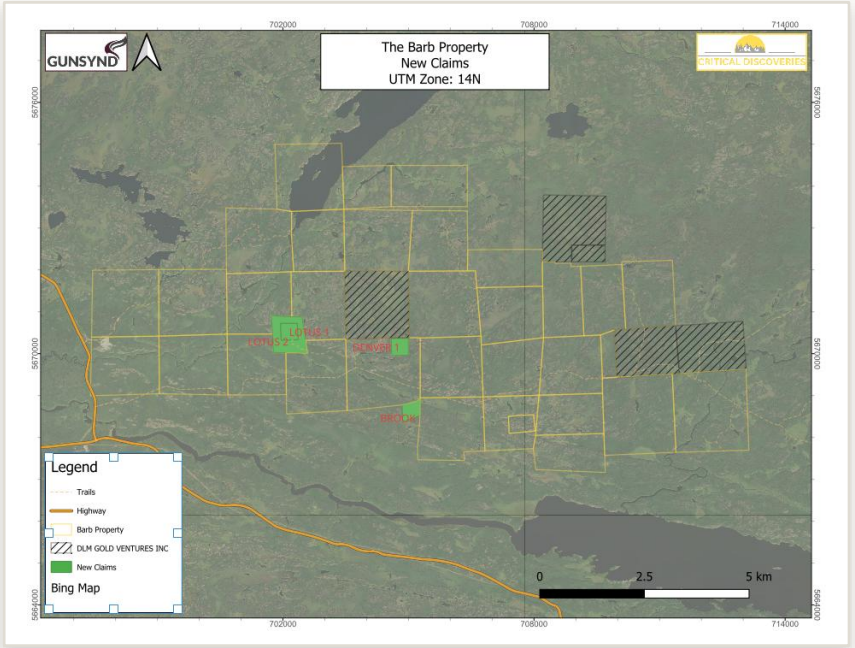

Consolidated land position

3

occurrences

~40 yrs

since last drilling

CORPORATE

Capital structure.

BOARD & MANAGEMENT

Hamish Harris

EXECUTIVE CHAIRMAN

20+ years in market-risk management at tier-1 investment banks in Singapore, Hong Kong and London; a decade in small-cap listed companies.

Donald Strang

EXECUTIVE DIRECTOR

Chartered accountant; senior finance and management roles across Australia, Europe and Africa, focused the past decade on mining and exploration.

Peter Ruse

NON-EXECUTIVE DIRECTOR

Finance professional, 12+ years in equity funds and institutional wealth management, specialising in mining, minerals and industrials.

THE CLOSE

Grab samples to 489 g/t Au. Visible gold confirmed.

Lotus drill target defined

The 2025–26 field programme has validated the geological model set out at acquisition — gold along the Wanipigow structural corridor.
